**Fort Worth, Texas, August 16, 2006**—Higher Power Aviation (HPA) is moving its headquarters and training operations to 4650 Diplomacy Road, Fort Worth, Texas at the south entrance to DFW International Airport. The new location, formerly owned by CAE Simu-Flite, expands the training capabilities for HPA's growing business.

The facility will be home to a newly acquired B737 Classic simulator, the first owned full flight simulator for the new facility. The on-site equipment will offer more convenience to HPA's growing customer list which includes two new airline customers for the device. The 50,000+ square foot facility houses four full-flight simulator bays and can expand to accommodate 16 simulators.

"This expansion opens the door to innumerable opportunities," said Joe Poore, chairman and co-owner of Higher Power Aviation. "At HPA, we value training and this expansion will give our customers an even better training experience."

"We will continue to be a company of values, a company that puts the needs of our customers first," said Mark Sterns, president and co-owner. "Our customers are our friends and going from 11,000 square feet to over 50,000 will give even greater opportunities for interacting and building relationships with our students, especially during their simulator phase of training."

The acquisition is anticipated to further solidify HPA's role as a growing and innovative company within the aviation training industry.

Higher Power Aviation, which began in 1994, is the leading FAA part 142 approved training center providing Boeing 737 type rating training to individual pilots for employment at Southwest Airlines and other operators. HPA further provides cockpit and cabin crew training on Boeing 727, B-757, B-767, DC-9 and MD-80 series aircraft and all models of the Boeing 737, from the Classic to the B-737 New Generation aircraft, including the C-40A for the U.S. Navy.
